30-75%

Pseudocode

Hardest part

Prompts: convert this pseudocode To python

100%

Code

Fn quote\_to\_idea(quote):  
Prompt = "Take this {quote} and convert it into 3 code ideas. Each idea should not require more than 100 lines of code. Think this through step by step."

Tbh I don't think I need to go through to the code step, it just takes energy and computers. It's kind of like a print in psuedocode state. though i could see myself using super style to edit the psuedocode

is this stupid does it make more sense to leave it as a chat in the first place?
